

Capital.com API - Accounts, Activity, Transactions & Financial State

Part 7 for CapitalDemoBroker / Codex

Source basis: official Capital.com Public API 1.0.0, accessed 10 Aug 2026. This is a Codex-oriented technical reference; unsupported behavior is explicitly marked as unresolved rather than guessed.

1. Accounts and session financial context

GET /api/v1/accounts returns financial accounts for the authenticated client. Session creation also returns accountInfo fields including balance, deposit, profitLoss and available, plus currentAccountId and account currency.

GET /api/v1/session identifies the active accountId, timezoneOffset, locale, currency and streamEndpoint.

2. Account activity history

GET /api/v1/history/activity
Optional query: from, to, lastPeriod, detailed, dealId, filter
Maximum documented from-to range: 1 day

Activity records expose date/dateUTC, epic, dealId, source, type and status. This endpoint is suitable for reconstructing operational events around SL, TP, working orders, user actions and system actions.

3. Transaction history

GET /api/v1/history/transactions
Optional query: from, to, lastPeriod, type
Default lastPeriod: 600 seconds

Documented transaction types include INACTIVITY_FEE, RESERVE, VOID, UNRESERVE, WRITE_OFF_OR_CREDIT, CREDIT_FACILITY, FX_COMMISSION, COMPLAINT_SETTLEMENT, DEPOSIT, WITHDRAWAL, REFUND, WITHDRAWAL_MONEY_BACK, TRADE, SWAP, TRADE_COMMISSION, TRADE_COMMISSION_GSL, NEGATIVE_BALANCE_PROTECTION, TRADE_CORRECTION, CHARGEBACK, ADJUSTMENT, BONUS, TRANSFER, CORPORATE_ACTION, CONVERSION, REBATE and TRADE_SLIPPAGE_PROTECTION.

Representative transaction fields:

```
{
  "date": "...",
  "dateUtc": "...",
  "instrumentName": "NATURALGAS",
  "transactionType": "TRADE",
  "note": "Trade closed",
  "reference": "12345678",
  "size": "1.05",
  "currency": "USD",
  "status": "PROCESSED"
}
```

4. Scenario 9 financial-result rule

For notifications and recovery, prefer broker-reported account balance/profitLoss plus transaction/activity records over a purely local reconstructed P&L.; Local calculations remain useful for strategy accounting but should not replace broker reconciliation.

5. Demo top-up operational fact

Capital.com documents POST /accounts/topUp for Demo balance adjustment. Limits: 10 requests/second and 100 requests/account/day; Demo balance cannot exceed 100000. This endpoint is not needed for normal broker trading logic and should remain outside CapitalDemoBroker's core execution path.

6. Source

Official Capital.com Public API: Accounts, Session, Account activity history and Account transactions history.
