

Capital.com API - Hedging, Precision, Constraints & Trading Hours

Part 8 for CapitalDemoBroker / Codex

Source basis: official Capital.com Public API 1.0.0, accessed 10 Aug 2026. This is a Codex-oriented technical reference; unsupported behavior is explicitly marked as unresolved rather than guessed.

1. Hedging preflight

```
GET /api/v1/accounts/preferences
Response includes:
{
  "hedgingMode": false,
  "leverages": {...}
}

PUT /api/v1/accounts/preferences
{
  "hedgingMode": true
}
```

The strategy requires simultaneous opposing exposure. CapitalDemoBroker must verify the active account's hedgingMode before cycle start. Do not infer it from the existence of previous positions.

Guaranteed stops cannot be set when hedgingMode is true according to the position/working-order parameter constraints.

2. Instrument precision and size constraints

GET /markets/{epic} exposes broker metadata used for validation: tickSize, decimalPlacesFactor, minStepDistance, minDealSize, maxDealSize, minSizeIncrement, minGuaranteedStopDistance, minStopOrProfitDistance and maxStopOrProfitDistance.

Use Decimal and broker metadata. Do not rely on binary float or generic Python round(). The public documentation exposes constraints but does not define a universal directional rounding algorithm for every protective/order field.

3. Trading hours and state

Market details expose openingHours with a zone and a live marketStatus snapshot. The adapter should use broker status as the immediate authority for whether a new trade may be submitted, rather than only a hard-coded weekday calendar.

Holiday exceptions and whether every modification/close operation is permitted during CLOSED state are not comprehensively defined by the public API page. Treat broker rejection/confirmation as authoritative.

4. GOLD selection

Use GET /markets?searchTerm=gold and then verify the returned epic/instrument metadata. Do not hard-code an assumed epic until the intended Capital.com GOLD market has been uniquely selected for the account.

5. Source

Official Capital.com Public API: Accounts/preferences and Markets details/dealingRules/snapshot.
