

Capital.com API - Codex Gap Register / Do Not Guess

Part 12 for CapitalDemoBroker / Codex

Source basis: official Capital.com Public API 1.0.0, accessed 10 Aug 2026. This is a Codex-oriented technical reference; unsupported behavior is explicitly marked as unresolved rather than guessed.

1. Purpose

This file lists requirements from the CapitalDemoBroker request that are not fully determined by the public Open API documentation. Codex should keep these as explicit unresolved contracts instead of implementing assumptions.

2. Unresolved or product-specific items

Topic	Current status
Exact GOLD close commission forecast	No universal formula in public Open API; needs product/account fee source
Remove only SL / only TP	Public update contract lists optional protection fields but does not clearly define null/zero removal semantics
Partial position close	Current DELETE /positions/{dealId} contract does not document a partial-size request body
Partial fill semantics	Not sufficiently specified for safe generic implementation
Client request/idempotency key	No documented generic client-generated idempotency field in the core trading requests reviewed
Complete rejection reason catalog	No single complete stable reason-code table found on public page
Directional rounding policy	Constraints/precision exposed, but no universal rounding-direction algorithm documented
Entry-filter candle basis	API provides Bid/Ask; strategy must decide Bid, Ask or derived Mid
Closed-vs-forming candle rule	Must be explicitly defined by project using UTC minute boundaries
Holiday calendar	Use live market status/opening hours; exhaustive holiday rules not in API contract
Guaranteed exact pre-close commission	Needs account/product-specific official fee logic
WebSocket missed-event replay	No universal sequence/gap replay guarantee established by public docs

3. Implementation policy

- Expose unresolved items as configuration or explicit NotSupported/NeedsVerification paths.
- Never substitute a guessed Capital.com enum, field or endpoint.
- Persist raw broker responses needed for later diagnosis.
- Use DEMO validation before enabling equivalent LIVE code paths.
- Keep trading writes non-idempotent unless Capital.com explicitly documents otherwise.

4. Source

Gap analysis against the official Capital.com Public API 1.0.0 and the CapitalDemoBroker requirements supplied for Codex.
